Mac Jee Introduction

Mac Jee stands as a strategic partner for **MBDA**, offering **cutting technology**, accelerating the path toward military autonomy, and delivering **strong financial returns** through a proven business model

The partnership aims to establish a long-term strategic collaboration in the defense industry, initially focused on setting up production facilities and enabling both immediate and future technology transfer to **meet MBDA's strategic needs**

Mac Jee represents the ideal platform for military opportunities on a global scale

- **A Unique Window of Opportunity**
A rare and time-sensitive opportunity has emerged for industrial platforms capable of rapid and scalable expansion
- **A New Era of Global Rearmament**
The world is entering a prolonged rearmament cycle, with unprecedented demand for munitions and missile systems..
- **Structural Constraints in Industrial Capacity**
Global industrial capacity remains constrained; limited, slow to scale, and concentrated among a small number of players
- **Scarcity of Independent Platforms**
There is a limited number of mature, independent assets available for acquisition, free from geopolitical or structural conflicts

Mac Jee Timeline

The Company reached excellence standards through the years

Since its foundation, Mac Jee has pursued strategic acquisitions and developed specialized military production facilities, building the expertise required to reach top-tier positioning in the defense sector

Acquisition

In 2019, Mac Jee **acquired Equipaer**, a traditional Defense segment partner of the Brazilian Air Force (FAB)

The production of energetic materials has transitioned to Mac Jee Technology, a new entity within the group dedicated to the development of energetic production lines

Foundation

2007

Start of Operations

Begins operations with national and international trading of military components

2013

First Heavy Investments

Investing in a new facility for cable production, with plans to develop advanced electronic systems for Defense and aerospace applications

2019

Defense Strategic Company

Acquisition of the land where the factory is currently located and the beginning of construction of the first assembly lines. At this point, Mac Jee ascends to a higher tier and begins to sell more advanced products in the national and international Defense markets

2020

New Factories and Portfolio

Mac Jee expands its portfolio and geographic reach, establishing one of the largest Defense factories in Brazil, and designing and operating a factory in Saudi Arabia, **becoming one of the key strategic players in the world and establishing itself as a global player**

Industrial Platform in Brazil: Scale, Sovereignty, and Global Reach

Strategically located in São Paulo State, Mac Jee's facilities combine world-class infrastructure to serve allied Defense markets globally

Strategic location in Brazil

São Paulo State, Brazil

1

São Jose dos Campos
Headquarters + Factory
50.000m²

2

Paraibuna
Factory
5.000.000m²

Robust and scalable industrial footprint

In its operations, Mac Jee operates major industrial facilities in São José dos Campos and Paraibuna, Brazil — totaling over 5,000,000 m². These sites are built for **large-scale, NATO-standard production** of ammunition, launch systems, and high-energy explosives, with modular and automated lines ready to scale

Technical excellence and multidisciplinary workforce

Mac Jee relies on a **highly qualified team** of engineers, researchers, and technicians across disciplines. This **in-house capability** ensures full technological sovereignty and strict global standards compliance

Comprehensive portfolio and strategic IP ownership

With **proprietary IP** and a broad portfolio spanning munitions, launchers, smart weapons, and energetic materials, Mac Jee plays a strategic role in Brazil's Defense industry — **combining licensed programs and in-house R&D capabilities**

Institutional recognition and global reach

As a **government-authorized Strategic Defense Company**, Mac Jee leverages strong institutional ties and export readiness. Its Brazilian operations serve as a **hub for allied markets worldwide**

Mac Jee's Portfolio

Current Defense Programs

MISSILES, GUIDANCE, SMART WEAPONS

These weapons are essential in modern warfare for their effectiveness in neutralizing threats, using advanced military technologies designed for precision targeting

HYPERSONIC

Hypersonic are propulsion systems designed to make vehicles reach high-speeds and are used in various aerospace applications

MULTIPLE ROCKET LAUNCHER SYSTEMS

An MRLS can deliver a large volume of firepower over a wide area in a short period, making it effective for saturating enemy positions or targeting specific zones

AMMUNITIONS

Ammunitions encompass a wide range of military ordnance designed for various combat scenarios, from blasts over long distances to bunker detonation

ENERGETICS, EXPLOSIVES, POWDER & CHEMICALS

Energetics are a class of highly reactive chemical compounds used to create powerful explosions, propel rockets, or ignite fuels

SPACE SYSTEMS

Satellite Launchers and Satellite Systems are fundamental assets for National sovereignty, resources monitoring and protection using technology and innovation from Space

Why MAC JEE?

1

Global Military Bull Market

- **Sustained increase in global defense spending**, driven by geopolitical instability and **rearmament cycles**
- **Governments are now prioritizing speed, scale, and industrial capacity**, pressuring suppliers to rapidly expand production to sustain readiness

2

Trending Missiles, Munition & Energetics

- **Energetics, missiles, and munitions** markets are resilient and growing, driven by increasing defense budgets and global demand
- **Stockpiles are critically low and capacity** is scarce, regulated, and slow to build
- **Mac Jee is a strategic asset** with know-how and installed capacity in a constrained market

3

Global Industrial Platform

- **Largest weapons manufacturer in the Southern Hemisphere** with existing facilities for missiles, rockets, boosters, and propellants
- Possibility to **instantly continue the development** of programs that are not yet concluded
- Counting on Mac Jee's support to **build and operate** the local facilities

4

Main Pillars for Value Creation

- **Fully licensed, certified**, and operational defense manufacturing and **testing infrastructure already in place**
- **Proven in-house IP**, with full technology control, end-to-end engineering capabilities
- **Ability to rapidly scale production**, reconfigure manufacturing lines, and absorb demand spikes

5

Unique competitive positioning

- **Independent player** combining global-player capabilities with cost efficiency
- **Rare balance between sovereignty**, technological depth and affordability
- **Superior brand** visibility supported by global presence, repeat orders and growing market recognition

1 Global Defense Market In Strong Growth

Sustained global demand for security is driving explosive growth in the Defense sector. Demand for artillery, rockets and smart munitions is surging. Investors are seeking sovereign, flexible supply sources

Market Outlook (CAGR 2024A-29E)

Expanding addressable market:

increased defense spending has become a structural policy. The sector is entering a supercycle with high backlog and recurring demand through 2035+

Sales revenues of the world's top 100 arms-producing companies increased 5,9% in 2024, reaching a record \$679 billion

Driven by escalating geopolitical instability and a growing number of simultaneous conflicts, increasing global security risks and uncertainty

Inventories at critical levels: years of accelerated consumption have driven ammunition and systems inventories to minimal levels, forcing urgent and continuous replenishment

March 2026

- **Trump pressures the defense industry for faster production,** linking budget increases to delivery capacity
- Top contractors were called to the White House to **replenish munitions used in Iran**
- Trump said that **missile makers had agreed to quadruple production** of selected systems..

- **Macron places France in a "war economy" and demands speed:** the French defense industry must accelerate production and investments
- **Europe is mobilising up to €800bn under Readiness 2030,** focused on air and missile defence, drones and military mobility."
- **Industrial efficiency:** he calls for companies to streamline processes, increase pace, and rapidly rebuild manufacturing capacity

1 Global Defense Market In Strong Growth

Sustained global demand for security is driving explosive growth in the Defense sector. Demand for artillery, rockets and smart munitions is surging. Investors are seeking sovereign, flexible supply sources

Global Defense spending reached **US\$2,7 trillion** in 2024

Further Supercycle Tailwinds

National drivers of defense spending		CAGR ¹		
		2014–22	2022–24	2024–29E
Europe	Russia-Ukraine war			
	Securing national and NATO borders			
	Defense budget increases in key markets	7% ↑	6% ↑	10% ↑
	Need to backfill US capability focused on APAC			
North America	Sustained investments in military			
	Countering Chinese activity in APAC	7% ↑	5% ↑	3% ↑
	Acute Russian threat			
MENA	Modernization programs			
	Regional security threats	2% ↑	5% ↑	4% ↑
	Defense industrial base strengthening			
APAC	Chinese incursions into territorial waters			
	New naval & airborne platform investments	6% ↑	8% ↑	8% ↑
	Defense budget increases in key markets			
	Significant budget increases in key markets			
Global defense budget		6% ↑	8% ↑	8% ↑

2 Players Are Competing By Investing Heavily In Long-Range Missile

Threat has led the Department of War to call upon the private sector for innovative new Technologies to implement its strategy

Country	Threat	Weapons	ICBM Reach	M&M Implications
	The U.S. is modernizing its nuclear triad and homeland Defenses to deter growing near-peer missile threats	ICBMs SLBMs ALBMs Hypersonic Tactical Nukes		Rising requirements are driving procurement and production ramp-ups to rebuild stockpiles
	Russia holds a large nuclear stockpile; disarmament START treaties set to expire in early 2026	ICBMs SLBMs ALBMs Hypersonics Tactical Nukes		High wartime consumption is driving sustained missile and munitions production and replenishment
	China is rapidly expanding its nuclear arsenal and adopting a more assertive doctrine	ICBMs SLBMs ALBMs Hypersonic Tactical Nukes		China's growing missile forces are accelerating regional Defense procurement
	North Korea possesses U.S.- range missile capability and remains an unpredictable threat	ICBMs SLBMs ALBMs Hypersonic Tactical Nukes		Continued DPRK missile activity is increasing regional missile warning and Defense spending

■ High Capability
■ Mid Capability
■ Low Capability

Near-peer missile expansion and hypersonic advances are driving demand for long-range strike and layered air and missile Defense
Ongoing conflicts and arms-control erosion are exposing stockpile gaps and reinforcing a sustained offense–Defense cycle

2 Players Are Competing By Investing Heavily In Long-Range Missile

Brazil's geographic positioning limits exposure to long-range missile threats from the Middle East

Iran's Missile Range

Even after Iran's March 2026 attempt to strike Diego Garcia (~4,000 km), current missile capabilities remain far below the transatlantic **range required to reach Brazil**, keeping the country outside the demonstrated threat envelope

Recent conflicts confirm Iran's missile activity is concentrated in **regional theaters**—Israel, Gulf states, and nearby bases—highlighting a threat profile that remains geographically contained and not global

From a geopolitical risk perspective, **Brazil's distance** (~11,000+ km from Iran) places it structurally **outside current operational missile reach**, reinforcing its low direct exposure to Middle Eastern conflicts

2 Global Missiles Sector Outlook

A structural gap in missile production is emerging, as demand for scale and speed exceeds traditional industry capabilities

Missiles Sector:

2025E Market Snapshot

- Surface-to-Air
- Air-to-Air
- Cruise
- Other
- Strategic
- Hypersonic
- Anti-Tank

Missiles Sector Projection

(US\$ bi)

8% CAGR

Market growth is volume-driven

Demand is shifting toward higher volumes, lower unit costs, and faster delivery, prioritizing availability over bespoke complexity

Structural limits of primes

Traditional players face trade-offs between advanced technology and industrial scale, constraining their ability to meet recurring high-volume demand

2 Global Munitions Sector Outlook

Structural demand growth and limited production capacity are driving attractive opportunities across the munitions sector

Munitions Sector:

2025E Market Snapshot

- Guided Artillery
- Guided Bomb
- Surface-to-Surface
- Other
- Torpedo

Munitions Sector Projection

(US\$ bi)

1% CAGR

CAGR by Region

- 21,7%
- 2,8%
- (13,8)%
- 5,0%
- 2,0%

Other

Middle East

Asia

Europe

North America

Structural supply–demand shock in munitions

Accelerated wartime consumption has outpaced existing production capacity, creating persistent bottlenecks in munitions, explosives, and propellants

Powder plants are the weak link in Europe's Munition boom

Limited propellant and explosive capacity is constraining munition production, making industrial capacity the critical bottleneck to scaling output

2 Energetics Sector Outlook

Production bottlenecks can be addressed through capabilities in energetics and industrial-scale manufacturing

The bottleneck isn't demand — it's installed capacity

Here is a shortage of industrial assets able to produce, formulate, and fill energetics at scale and speed

Supplier base is narrow only a few fully certified players support supply, limiting redundancy and surge capacity

"NATO-grade" certification is a hard constraint: even basic inputs rely on a handful of qualified plants, creating systemic supply risk

Energetics capacity is highly concentrated and tightly regulated: scaling requires specialized facilities, safety/licensing

Military Propellants and Explosives Market Size (us\$ mm)

Rising Geopolitical Tensions and Conflicts to Increase the Demand Globally

■ Revenue 2025
■ Revenue 2033E

Energy Weapons Market: US\$8,6 bi Market on track for US\$32 bi by 2033

Market Snapshot

3 Mac Jee as a Global Industrial Platform

One of the last independent platforms available in the market – a rare, privately owned and independent industrial asset positioned to scale globally

Multi-Country Platform

- **Independent & Private Platform**

Privately held and fully independent company, with no structural constraints and strategic and governance flexibility

- **Relative Geopolitical Neutrality**

Ability to serve multiple geopolitical blocs, no embedded conflicts of interest and trusted supplier positioning across regions

- **Idle Production Capacity**

Mac Jee is ready to absorb demand surges, ensuring rapid scalability in response to operational shifts

📍 Countries with Mac Jee Presence

Unlike state-owned or structurally constrained assets, **Mac Jee is a true industrial platform** — built for scale, neutrality, and global deployment

4 Three Core Value Creation Pillars

Manufacturing & Testing Capacity

Building a fully licensed, certified, and operational defense manufacturing and testing platform from scratch takes years, involves significant regulatory risk, and requires substantial capital — **all of which MAC JEE already has in place**

20.000 m²
of production area

+

5.000 m²
building expansion
by 2027

Largest integrated defense industrial complex in the Southern Hemisphere

Meaningful, operational manufacturing capacity with **available headroom**

End-to-end infrastructure for: I) Testing, II) Ballistic trials, III) Large-scale certifications and homologations

Technology & Proprietary IP

Technological independence with proven industrial application. In-house proprietary technologies across:

- ✓ RATO missile
- ✓ Air Ammunition
- ✓ Air to Ground Missile
- ✓ Air to Air and Air Defense Missile
- ✓ MRLS Rocket launchers
- ✓ Fuzing
- ✓ TnT, RdX, HMX Production
- ✓ Rocket motors

Proven IP

Proprietary IP that is applied, tested, and homologated, not concepts or prototypes

End-to-End Engineering

Fully integrated internal engineering capabilities, from design to scaled production

Technology Control

Full control over critical technologies and sensitive supply chains

Strategic Autonomy

Reduced dependency on third parties and external restrictions

Agility & Volume

Proven ability to:

Rapidly ramp up production

Reconfigure manufacturing lines

Absorb demand spikes

In a market where **speed and cost matter as much as technology**, Mac Jee's industrial agility translates directly into competitive advantage

4 Mac Jee as a Strategic Infrastructure Platform for MBDA

Mac Jee combines strategic facilities, regulatory readiness and industrial control to provide MBDA with scalable capacity, supply security and a reliable base for long-term international expansion

5 MM m²
of Total Area

1.000 tons
TNT equivalent storage capacity⁽¹⁾

+5,0x
Expansion Storage Capability

Licensed Areas for Expansion

Mac Jee **controls licensed land and pre-approved expansion areas**, giving MBDA a faster path to industrial growth without long permitting cycles

Fully Owned Manufacturing Facilities

Fully owned manufacturing footprint with **large-scale storage capacity**, ensuring control over production, quality and scalability

Strategic Facilities

Mac Jee's facilities are **located in a neutral geography, far from major conflict zones**, offering MBDA stronger operational continuity and supply reliability

Largest strategic explosives storage capacity in the Southern Hemisphere
Ensuring supply security and supporting partners with infrastructure constraints

IFI-certified products
IFI certification is the Brazilian Air Force approval ensuring a product meets required standards for aerospace and defense applications

Audited by Big Four firm
Ensuring high standards of governance, transparency and financial reliability

4 Strategic Defense Manufacturing Hubs

Fully authorized by Brazilian and international authorities, Mac Jee operates TNT and RDX plants through JVs, strengthening MBDA's industrial positioning in the Middle East

Established presence in the JVs in the world

Strategic location within Saudi Arabia's leading Defense hub

The plant is located in the **SCCL complex, Saudi Arabia's main explosives hub**, ensuring logistics efficiency, industrial autonomy, and alignment with national Defense goals

Fully operational, large-scale energetic materials facility

With **500,000 m² of installed capacity**, the plant produces **HMX, RDX, TNT, and base propellants**. It's fully automated, safety-focused, and designed to meet the demands of advanced Defense systems

Nato-aligned export standards and global compliance

The facility follows **NATO-aligned protocols** and **international export regulations**, ensuring full traceability, quality assurance, and safe access to regulated global markets

Stronger Middle East positioning for MBDA

Through Mac Jee, **MBDA gains access to an operating industrial platform in Saudi Arabia**, reinforcing local presence, strategic relevance and proximity to regional demand

5 Three Core Value Creation Pillars

Mac Jee stands out as the only independent defense company that unites the capabilities of global players with competitive cost structures, positioning itself as a sovereign and reliable alternative in the global defense market

Traditional Defense Primes

- ✓ **Deep technological expertise** and long-standing relationships with Tier-1 governments
- ✓ **Strong program credibility** and integration in complex, high-end defense systems
- ✗ **No true independent players:** nearly all OEMs are state-owned or politically entangled
- ✗ **Long decision-making cycles** and limited flexibility to rapidly scale production
- ✗ **High technological sophistication**, but optimized for low-volume, complex programs

- ✓ **Neutral and agile governance:** no state control, no external interference
- ✓ **Sovereign technology and full IP ownership:** end-to-end capability across the entire Defense chain
- ✓ **Immediate operational readiness:** workforce, facilities state of the art, and execution capacity already in place
- ✓ **Global brand recognition**
- ✗ **Current footprint still concentrated** in selected geographies
- ✗ **financial leverage for expansion**

Emerging / Local Players

- ✓ **Lean cost structures** and proximity to local markets
- ✓ **Operational flexibility** in small- to mid-scale programs
- ✗ **Primarily regional footprint** with limited international credibility
- ✗ **Unviable to build from scratch:** 10–20 years, billions in CAPEX, and massive regulatory and technological risks
- ✗ **Lack of installed capacity:** no production facilities, qualified teams, certifications, or proven products

MAC JEE's competitive lies in combining the strengths of both extremes while mitigating their structural limitations

5 Unique Competitive Positioning

Mac Jee stands out as the only independent defense company that unites the capabilities of global players with competitive cost structures, positioning itself as a sovereign and reliable alternative in the global defense market

1 Products and launches

Portfolio with over **30** programs and products, covering applications across missiles, rockets, guided munitions, energetics, and strategic defense systems

High perceived value in its products

2 Brand awareness and reach

Established brand with over **20 years** of proven technical reliability, growing global presence and **potential for spin-off across business units**

Reference in

5 MAC JEE to become a Spinoff brand of MBDA Worldwide

Leveraging Mac Jee's brand, industrial capabilities and global footprint to scale MBDA's presence in high-growth defense markets

1 Complementary industrial platform

Mac Jee provides a flexible and scalable industrial base, supporting production ramp-up and complementing MBDA's high-end, complex manufacturing footprint

2 Enabling cost-efficient and scalable systems

Mac Jee enables development and production of cost-efficient, high-volume solutions, complementing MBDA's focus on advanced, high-spec missile systems

3 Energetics expertise and supply chain resilience

Mac Jee brings in-house energetics production (TNT, RDX, HMX and propellants), strengthening MBDA's supply security and reducing reliance on external suppliers

4 Platform for expansion into new segments

The combination enables expansion into emerging segments such as loitering munitions, tactical systems and scalable missile platforms, reinforcing MBDA's position in a rapidly evolving defense landscape

5 Mac Jee as a Platform for Scalable Missile Expansion

A complementary industrial platform to support MBDA's expansion with scalable capacity, production flexibility and faster time-to-ramp

Beyond high-end missile systems

Mac Jee gives MBDA access to missile segments defined by scale, speed and **cost-performance optimization**

With ready industrial assets and expandable factories, Mac Jee enables **immediate production ramp-up** in different missiles segments

Scalable precision strike systems

Mac Jee supports growing demand for scalable precision strike solutions with faster replenishment and strong cost-performance balance

Immediate expansion capacity

Partnering with Mac Jee gives MBDA immediate access to ready industrial capacity, avoiding the time and cost of building new facilities

5 Mac Jee as MBDA's Energetics Backbone

In-house energetics production and process technology to secure supply, reduce cost and support long-term replenishment

In-house energetics production and supply security

Mac Jee provides **in-house energetics production** and **know-how**, **strengthening supply security**, reducing import dependency and supporting scalable vertical integration.

MUNITIONS

Business Unit | Mac Jee Munitions at a Glance

Certifications & Accreditations

ISO 9001 Certification

Formal recognition that Mac Jee's Quality Management System (QMS) meets the requirements of the international ISO 9001 standard

AS Certification

Certification that ensures compliance with aerospace industry standards for quality, safety, and reliability

OEA

OEA Certification

Certification granted by national customs authorities to companies involved in foreign trade that demonstrate high standards of security, compliance, and reliability

Core Capabilities

High-volume manufacturing of aerial bombs (MK & BLU series) and artillery ammunition (e.g., 155mm), with proven monthly production capacity and export track record

100% Brazil-based production, **ITAR-free, compliant** with NATO standards, enabling flexible exports and reliable international supply

Advanced engineering capabilities for bunker penetration, detonation performance, and structural impact, validated through testing and simulation

EXECUTIVE SUMMARY

Mac Jee Munitions offers a portfolio of military ordnance designed for combat, ranging from long-range engagements to bunker penetration. The company focuses on scalable production, reliability, and performance, supporting defense forces with consistent supply and operational readiness across multiple applications

Certifications & Accreditations

Strategic Defense Company (EED)

certified for its capabilities to develop sensitive technologies and ensure security and operational autonomy

Strategic Defense Product (PED)

essential product for national sovereignty and security, involving sensitive technology, prioritized military application, and national production

Core Capabilities

Space Access: Launch Vehicles for LEO orbit, for up to 500 kg payloads, in several booster configurations

Suborbital Missions: Hypersonic or sounding rocket missions for up to 600 kg payloads, Mach 10 top speed, reentry missions and microgravity

Satellites: GNSS, telecom and remote sensing satellite missions' architecture, design, integration and operations

EXECUTIVE SUMMARY

Founded indigenously by Mac Jee group in 2024, this unit started with RATO-14X hypersonic vehicle project and later partnered with Brazilian Air Force to industrialize the national VLM-1 microsatellite launcher (2025). Supported by a multidisciplinary team with strong space systems expertise

Participation in **the 2 top priorities** aerospace projects for the Brazilian Air Force

Portfolio | Microssatellite Launch Vehicle (VLM-1)

Brazil's 1st Space Launch Vehicle

VLM-1

Microssatellite Launch Vehicle. Brazilian Air Force National space vehicle, designed to achieve LEO orbits. ITAR-free and modular design

20 m
Length

30 tons

Solid Propellant
Full composite SRMs

Motor Specifications. 3 stages, being 2x S-50 motor (450 kN) + 1x S-44 motor (35 kN). Optionally, 2 S-50 motors can be added as parallel boosters in the 1st stage

Vertical Launch. Launch table, with minimum complexity

Control Systems. All sensors and actuation systems are designed for multiple orbit and trajectory strategies

Alcantara Space Port. The best place for rocket launch in the world, due to the Earth's additional rotation

Mac Jee At a Glance 3

Mac Jee Investment Thesis 8

Business Units and Portfolio 27

Financials 47

Strong financial track record

Consistent growth and margin resilience driven by scale, execution and strong positioning in defense markets

Total Revenue – US\$ mm

Strong revenue growth driven by expansion in defense demand and production scale-up

Adjusted EBITDA – US\$ mm

High-margin profile aligned with specialized defense manufacturing capabilities

Note: (1) In 2024, the Company prioritized market penetration and product validation, operating at approximately 25% of its installed capacity. Adjusting for non-recurring rework costs (USD 2,5 million) and reflecting a normalized operating level, the business would have generated an EBITDA of approximately USD 3,7 million

Strong projected growth trajectory

Revenue growth driven by backlog conversion, capacity expansion and increasing global demand for defense solutions

Projected Revenue – US\$ mm

The projected growth reflects a combination of backlog visibility and scalable industrial capacity, positioning Mac Jee to capture increasing global demand across key defense segments.

The Company operates with significant available capacity and a fully integrated platform, enabling rapid volume ramp-up without requiring proportional increases in fixed costs. Growth is primarily driven by:

- ✓ **Acceleration in missiles and munitions** demand amid global rearmament trends
- ✓ **Expansion of energetics** production, addressing critical industry bottlenecks
- ✓ Increasing **international penetration** supported by a geopolitically neutral positioning

As volumes scale, the business is expected to benefit from strong operating leverage and reinforcing **Mac Jee's position as a rare, independent, and scalable defense platform.**

MAC JEE
MUNITIONS

Potential | Mac Jee Munitions

Already producing at scale, growing on the lightest capital requirement of the three

THE INVESTMENT CASE

Munitions is the group's proven engine, the unit already producing at scale with lines built, certified and running. Growth comes from filling capacity that exists, across more than one product line, on a mix that supports profitability as volumes rise

Gross revenue by driver (US\$ mm)

Value Drivers

1 Capacity is already built

Munitions is the unit already producing at scale, with lines built, certified and running. Growth comes from filling industrial capacity that exists today

2 Growth comes from more than one line

The artillery ramp carries the near term, while a launcher platform built on the same engineering base adds a second growth leg over the plan

3 Profitability travels with the mix

A tail of smart weapons and fuzes carries richer margin than bulk artillery, so as volumes scale the mix supports unit profitability rather than diluting it

32%

MACJEE
ENERGETICS

Potential | Mac Jee Energetics

Revenue already contracted, and a pipeline that sits outside the plan

Gross revenue by contract (US\$ mm)

Value Drivers

1 Revenue is contracted, not forecast

The near term rests on signed contracts with sovereign grade counterparties, in plants that are already licensed and fully operational

2 Renewals are a floor, not a forecast

Expiring contracts are booked back at deliberately conservative levels, so the plan never depends on the replacement cycle the installed base would normally deliver

3 Upside sits outside the plan

A live proposal pipeline stands well above what the model books in the later years, so every conversion lands on top of the Base case rather than inside it

THE INVESTMENT CASE

Energetics is the group's contracted cash engine, with revenue secured by signed country contracts in plants that remain fully operational. Renewals are set conservatively, so the live pipeline is upside on top of the plan

Gross revenue in 2027E

USD 8 mm
Growth capex, 2027E

Potential | Mac Jee Missile

The unit that becomes the largest and most profitable in the group

Gross revenue by programme (US\$ mm)

Value Drivers

1 The unit becomes the group's engine

Missile moves from an emerging operation to the largest and highest margin unit in the group, becoming the main driver of consolidated growth over the plan

2 Capacity is funded upfront

The build is concentrated in a single investment cycle. Capacity is therefore in place before deliveries scale, and the years that follow convert revenue into cash

3 Breadth reduces execution risk

Deliveries are spread across cruise missiles, air defence and rockets, so no single programme carries the ramp and the mix keeps unit profitability high

THE INVESTMENT CASE

Missile is the equity story, moving from an emerging operation to the group's largest and highest margin unit. The investment behind it is committed once, unlocking a portfolio of programmes rather than a single product

64%
